

Personal Protective Equipment Respirator System Per Worker Unit Cost Breakdown

OSHA's Respiratory Protection Standard (29 CFR 1910.134)¹ identifies several types of respirators and their Assigned Protection Factors (APFs). The APF denotes the level of respiratory protection that a given respirator is expected to provide employees. Table presents example annualized unit costs estimates for respirators, respirator system components, training, fit testing, and medical clearance. Actual costs will vary for each rule depending on the affected industry and the analytical timeframe. Useful lives define the schedule used to discount each cost component before the estimates are annualized.

Respirators are organized by their corresponding APF. Unit cost estimates for individual respirator system components and kits are based on price data collected from retailer websites. Price data are averaged for component and kit unit cost estimates that incorporate the price of more than one product brand.
